

GREEN STATEMENT

Photogram subscribes to the “Three Rs”: **Reduce, Re-use, Recycle**. We are committed to promoting and contributing to a cleaner, safer environment. We constantly improve our processes through re-engineering and recycling to minimize our environmental footprint.

Photogram products are manufactured from 100% recyclable PET (polyester). This material is a valid option in terms of eco-compatibility because it is fully recyclable and is considered a “low environmental impact” material. All extruded materials used in our production can be ground and shredded for reuse in post-consumer products by most independent and/or industrial recycling facilities.

No polyvinyl chlorides (PVC) are used in Photogram products. In addition, as a printer of plastic substrates, Photogram is proud to use biodegradable inks.

At Photogram, we know that environmental, economic and social issues are all interrelated. By implementing best environmental practices, we believe we have a positive impact on our world.
